PRECISION MESHES

EXTRUDER SCREEN

We specialise in the manufacture of screens for all types of extruder and screen-changer. These can be in the form of plain discs or washers, multiple screenpacks of spot-welded construction or bound with aluminium or copper rims, multilayer tubes or specially profiled screens. They are produced on high speed automatic presses and supplied in convenient consumer packs. Auto-screening rolls are also available - please ask us for details.

FILTERS AND STRAINERS

We can produce filters, strainers, baskets, screen cylinders and wire baskets inserts, incorporating woven wire mesh as the filter medium, to your own specifications. These are generally of welded or soldered construction.

FILTER ELEMENTS

We produce filter elements in a wide range: plain or pleated, cylindrical or conical.

MADE-UP SCREENS & SCREEN RECOVERING

We produce screens suitable for use on vibratory and other screening plant. These are normally fitted with hoolstrips, eyelets or other special edging to enable them to be tensioned, or are bonded to a frame. We offer rapid turnaround on recovering any screen from our extensive range of meshes.
